

Your job is to protect the enterprise's information.

**But the business is changing.
Is your identity and access
management capability ready?**

Mobility, IoT, "as-a-service", globalization, and other changes are stressing your IAM platform. Do you have, or are you putting in place, the required components, services, and related audit trails to support your legal and fiscal responsibilities – efficiently and effectively?

Let TechVision Research help you understand what you are doing well and what you might need to improve.

TechVision Research's Identity and Access Management(IAM) workshop will help your organization develop a more holistic identity & access management solution and achieve key objectives associated with increased security, workflow automation, auditability and cost effectiveness.

Why should I attend?

- **Use a focused, collaborative learning experience** to collapse project timelines and make major project decisions.
- **Use our proven and road-tested methodologies** to get your project done quickly and effectively.
- **Develop and train your team** through collaboration with our expert principal consulting analysts.
- **Extend your team** by drawing on our principal consulting analysts across a wide range of specialties.
- **Produce a tangible model** for expressing & tying business case to business processes and IAM projects.

Building a top-flight identity & access management platform requires multiple stakeholders, including information technology (IT), human resources (HR), corporate security, and application owners, to resolve complex technical and process issues. Representatives from these different interests are encouraged to attend.

The agenda

The workshop consists of four segments: pre-meeting survey, on-site training, facilitated planning, and post-session reporting. The training portion of the Identity & Access Management Workshop is focused at both business and technical levels.

Pre-meeting Survey

Prior to the workshop, TechVision Research sends brief survey to workshop participants to capture a snapshot of the organization's overall IAM and related IT environments. Our consultants use this information to tailor the workshop to the existing customer environment and to fast-track the information gathering component of the 'brainstorming session' on Day 2.

Use our knowledge and experience to supercharge your IAM strategy. Our workshop helps you get the job done for a fraction of cost of engaging a big five firm and with much less effort than you'd need to do it yourself.

Identity Management On-site Workshop

TechVision Research conducts the facilitated portion of the Identity & Access Management Workshop in a 2-day structured format.

On-site training

Think of the first day of the workshop as an immersion course in IAM. Whether you are new to the discipline or a seasoned expert you are guaranteed to get something out of the discussions and exercises.

- Getting to know the room - identify organizational roles and specific interests in IAM
- Quantifying the business value derived from building IAM systems
- A Rosetta stone of identity and privacy terminology and technology
- A deep dive into the TechVision Research Reference Framework for IAM
- A tour of IAM products and vendors
- Connecting the dots - integration with other systems and processes
- Q&A – relating what we've learned to what we do
- Homework assignment

Facilitated planning

Day 2 is where we blend what you learned on day 1, your homework assignment, and the results of the pre-meeting survey. TechVision Research consultants use proven techniques to interactively explore options with the group to drive consensus toward an integrated identity & access management strategy for the enterprise. During this session, the consultants will work with the team to build on the strategy by facilitating the development of a high-level action plan.

- Participants describe their environments via 20 minute 'mini presentations' to the workshop group
- TechVision Research facilitates the develop a high-level conceptual architecture and strategy
- Jointly develop an action plan for moving forward
- Wrap-up

Post-session reporting

Following the on-site meeting, TechVision Research will provide you with a 25-30-page written assessment. The assessment will include a series of tactical and strategic recommendations, focused on the specific topics above, to move your identity management infrastructure forward.

The **TechVision Research Reference Architecture for IAM** is a master template that identifies the IAM capabilities (rather than technologies) that can be improved or enabled, allowing business stakeholders and technical architects to achieve a common language for IAM functions, which can then be refined over time.

Those capabilities are described at the highest level as: **Interact** – how end-users and application developers interact with the IAM platform.

Access – the rules that define the roles, rights, and obligations of any actor wishing to access enterprise assets.

Change – the capability to define and manage the relationships between the user/ application developer and the enterprise assets.

Manage – the capabilities required to manage and upgrade the IAM solution itself.

Measure – the capabilities required to audit and improve IAM activities.

Store – the capabilities required to share identity information and relationships between the components of the IAM solution.

"Very valuable information - bias free research and analysis. ROI and business case given priority."
- Workshop Coordinator

"The coverage was detailed and technical. It also covered upcoming issues. As a result, I left the workshop with information on the problems and technologies that I expect to face."
- Workshop Attendee
