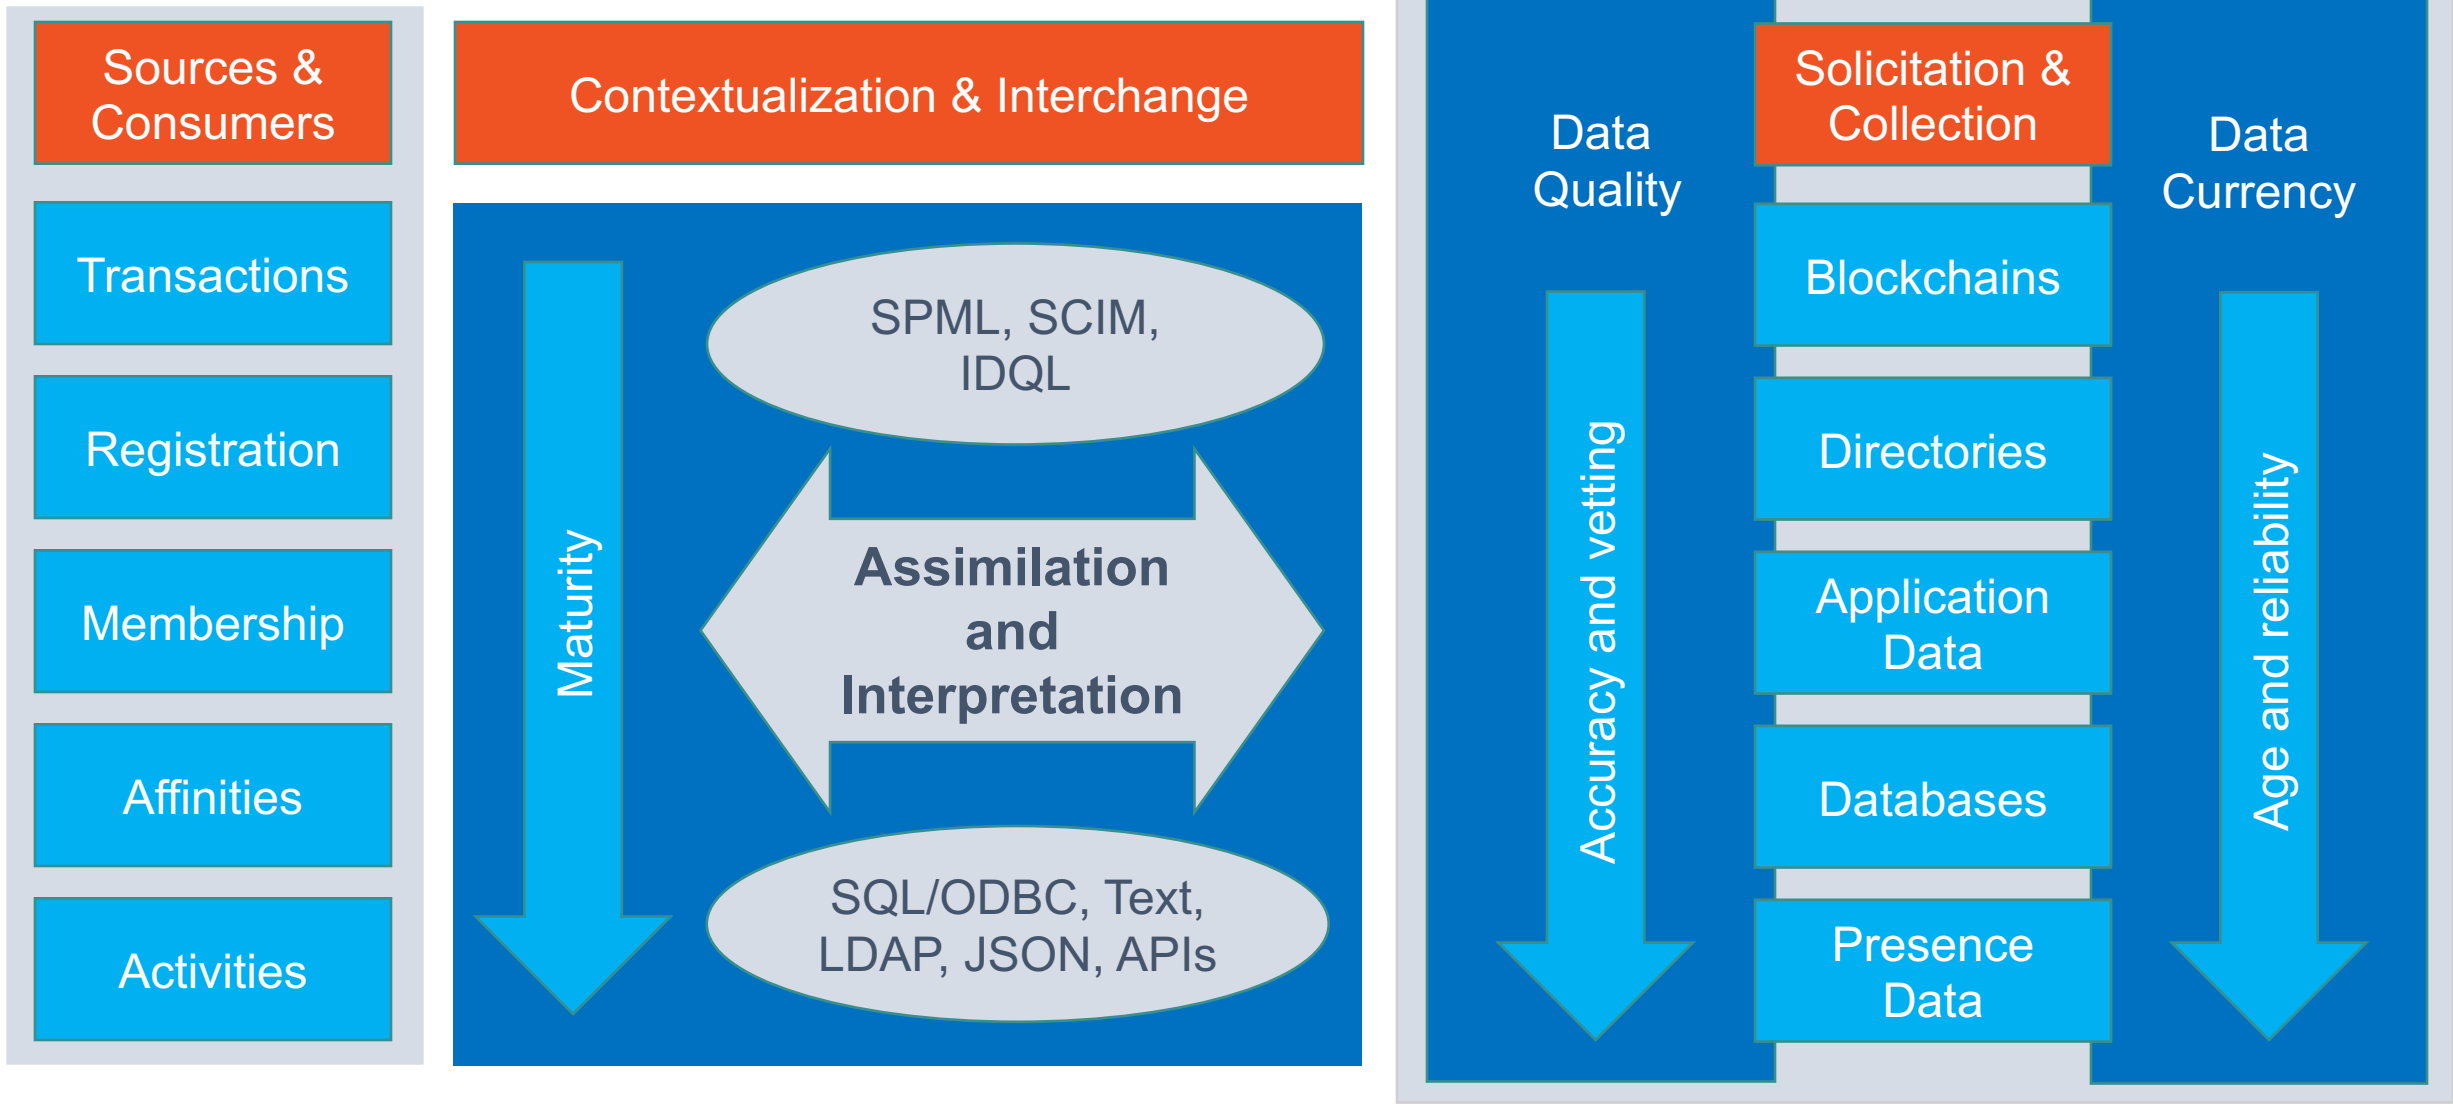
Identity Data Landscape



The Winds of Change

Short List

- Digital Transformation
- Cloud Adoption
- Identity Expansion
- Generational Challenges
- Societal (Im)maturity
- International Transitions
- Pandemics
- Unleashed Politics and Religion

Implications

- Fraud, (Dis)trust, Good/Bad Risk
- Business and IT Disruption
- Zero Trust, (Dis)aggregation
- Variable Attention and Focus
- Varied Levels of Expectations
- Reliability of Trust Anchors
- Business Operations
- War, Governmental Change

Can Standards Address These Challenges?

- What can we (industry) rely on, refactor, institute to establish a scalable identity foundation?
- How do we migrate from legacy identity approaches to a more universal identity infrastructure? What industry constituencies are making progress, and how?
- Are standards efforts leading the charge or bringing up the rear?
- What middle ground exists to interpret and assimilate data for specific contexts?
- How will AI and robotics contribute? How will they influence standards?
