Security Legends Panel Introduction

Digital Transformation
- Where is cybersecurity failing? Succeeding?
- What entirely new requirements are emerging?
- Are we aligning with business or drifting away?

Multicloud Environments
- How can we manage and protect hybrid, multicloud applications and use cases? Software supply chains?

Expanding Risk Matrix
- How successful are we at managing risks of hybrid working environments? Expanding regulatory requirements? New digital use cases?

Cybersecurity Skills Shortage
- What are opportunities and pitfalls of addressing resource shortages by automating, simplifying, outsourcing, delegating duties to IT staff?

Questions/Topics for Panelists

- In light of recent issues with CISOs at Uber and Twitter, do you see CISOs losing their position of trust in many organizations?

- How and why do we address the self-perpetuating misconception many people have that cybersecurity should be simple?

- Considering continuing skill shortages for cybersecurity staff, how can companies "outsource intelligently"?

- What are some good strategies for data discovery and shared responsibilities definition across the multicloud fabric?

- How can large companies best solve supply chain security issues with small but critical suppliers?

- What are some opportunities for companies to use automation to address vulnerability and configuration management?

- How can companies gain the potential assurance and efficiency gains from SBOM and related technologies?
